

precipitating fine silver particles on the surface of the
light reflector layer; and

confronting a transparent substrate with said substrate
on which the light reflector layer is formed, and sandwiching
a liquid crystal layer between the substrates.

Please add the following new claim:

--29. A process according to claim 18, wherein the step
of forming a light reflector layer of the mixture includes
exposing the mixture to light, thereby photolithographically
forming the light reflector layer of a desired pattern, and
the step of precipitating fine silver particles on the surface
of the light reflector layer includes heating the light
reflector layer under a predetermined temperature condition,
thereby precipitating the fine silver particles on the surface
of the light reflector layer.--

REMARKS

By the above amendment, claim 18 has been amended to
delete features, such that claim 18 now recites features which
are coextensive with the features of claim 1, and a new
dependent claim 29 which depends from claim 18, has been
added, reciting the features which have been deleted from
claim 18.
